PROFILE

Muhammad Noman Ajmal

Data Engineer / Junior Database Analyst

+92-344-3440069 Karachi, Pakistan noman.pnec1461@gmail.com github.com/Noman1461
linkedin.com/in/nomanajmal Medium

SUMMARY

Data Engineer focused on ETL/ELT pipelines, database workflows, and data quality systems. Experienced in Python, SQL, MySQL, PostgreSQL, Pandas, and automation tooling, with hands-on work across ingestion, validation, transformation, and reporting layers. Strong interest in building reliable data systems that support analytics, performance, and operational decision-making.

TECH STACK

Python	SQL	Pandas	MySQL
PostgreSQL	Docker	Git	Power BI
Flask	Azure	ETL/ELT	Data Quality

EXPERIENCE

Data Engineer (Contributor)

Apr 2026 – Present

Omdena · Remote

- Designed and developed scalable data ingestion pipelines for weather and Earth observation datasets to support analytics and ML workflows.
- Helped modernize pipeline processing logic by improving workflow structure, quality checks, and cloud delivery patterns.
- Built Python-based ETL workflows for data collection, processing, validation, feature engineering, and delivery to cloud storage.
- Collaborated with data scientists and engineers to define data contracts, improve data quality, and support downstream model readiness.

AI Automation Engineer

Dec 2025 – May 2026

Zyne Ventures

- Designed and deployed RESTful APIs using Flask to manage workflow automation and database interactions.
- Engineered automation pipelines that processed payment records into the database, reducing manual effort and improving consistency.

PROJECTS

CafeFlow: End-to-End ETL Orchestration

GitHub

Python · PostgreSQL · Pandas · Docker

- Built a data pipeline processing 7,139+ records with 6 quality checks, including regex validation, range checks, and cross-field total validation.
- Achieved an 84% data pass rate with rejected-row logging and JSON quality reports for monitoring and debugging.
- Applied modular design, error handling, secure credential management, and Git-based version control.

EDUCATION & CREDENTIALS

National University of Sciences and Technology

2020 – 2024

BSc Electrical Engineering
CGPA: 3.12 / 4.00

Data Engineering Crash Course

Luke Barousse

Data engineering fundamentals, ETL/ELT, Spark, Airflow, dbt, and production pipeline design.

Selected Learning

Microsoft Fabric / Azure, SQL optimization, database design

Focused learning in data systems, query performance, validation, and analytics workflows.
